VIRTUAL CONFERENCE

OVERVIEW

Lung cancer treatment is rapidly evolving. The special edition of the Conference "Lung Cancer", composed by three meetings, will provide current and practical information on the treatment of lung cancer, as well as a look at the novel agents and strategies with the potential to shape the future of lung cancer therapy.

This Virtual Conference will allow experts and participants to discuss the latest findings, put them into context and really understand how they affect our practice day to day. Participants will gain the opportunity to engage with faculty as they will share their point of view and personal experiences about the clinical challenges and ongoing controversies in lung cancer management.

Leading national and international experts will share their knowledge and perspectives on the management of thoracic malignancies, in order to disseminate education and improving the best practice of Italian lung cancer specialists.
