# RATIONALE

The 12<sup>th</sup> "Milan Congress on Anticancer Innovative Therapy" Conference will involve leading international experts in the field of immuno-oncology and biologic therapy of cancer to improve the potential, opportunities and challenges of the new approaches.

The increasing knowledge of the molecular mechanisms responsible for neoplastic progression, the characterization of tumor microenvironment, and the immunological/angiogenetic mechanisms regulating the tumor-host interaction, allowed us to identify and apply more effective anti-cancer biological and immunological treatments.

To date, the immuno-biotherapy is a continuously evolving treatment modality and it is currently integrated into the treatment algorithms of several different tumor types. The role of tumor metabolism and diet in tumor evolution and their impact on the outcomes of patients undergoing immunotherapy will be focused on.

This conference explores topics that will appeal to clinicians, as well as, basic, translational, and clinical scientists ranging from academics to industry. As in the past, the meeting will provide a highly interactive forum in which leading experts will discuss clinical and pre-clinical data, providing the audience with a broad overview of the most recent achievements in cancer biological and immunologic therapy.

Finally, a wide spectrum of evolving topics in cancer research such as epigenetic drugs, nanoparticles and CART cell-based new constructs will be analyzed in view on introducing them to the clinical setting.
